FAX: 402-472-8652
<http://www.necrop.org>**

The Nebraska Crop Improvement Association is dedicated to enhancing the economic viability and well-being of the people of Nebraska and the world, through value-added products and processes.

We will achieve this goal through an organizational structure which attracts the finest people, fully develops and challenges individual talents, encourages industry-wide collaboration to advance agriculture, and maintains the association's historic principles of integrity.

OFFICERS

Emery Fox, Crawford President (District 4)
Jim Girardin, Broken Bow Vice Present (State-at-Large)
Ruben Wehnes, Inland Treasurer (District 2)

DIRECTORS

Eric Nelson, Mead District 1
Conrad Nelson, Wallace District 3
Chris Cullan, Hemingford State-at-Large
Duane Muhlbach, Ravenna State-at-Large
Mike Fritz, Murdock Seed Trade Representative
Martha Mamo, Lincoln Agronomy Representative
Michael Boehm, Lincoln IANR-UNL Representative

STAFF

Steve Pageler Certification Manager
Diane Brestel Administrative Assistant
Lynn Robinson Lab Supervisor
Cody Harris Field and Laboratory Technician

The purpose of this directory is to provide crop producers, decision makers and the seed industry with a reference to seed sources in Nebraska.

Agronomic or disease rating information has been adapted from information made available by the variety owner. For the most accurate information please contact the variety owner or your seed supplier.

This seed book includes those members whose fields were planted with eligible seed stocks and whose applications for field inspection were received by the publication date.

Inquiries about seed supplies and prices should be directed to the growers and/or seed enterprises listed, not to the Nebraska Crop Improvement Association.

In no case is the seed listed in this seed book yet **CERTIFIED**, for it must be conditioned, tested in the laboratory, and labeled with the official certification tag or bulk sale certificate before it can be offered for sale as Certified Quality Seed.

Seed producers, conditioners, and distributors voluntarily use the seed certification process to assure their customers that extra care has been taken to provide them with correctly identified, genetically pure seed. The **CERTIFIED SEED** label identifies seed meeting quality requirements and assures the buyer of obtaining reliable performance of the variety named on the label.

Each member is responsible for handling certifiable seed so it will also meet the Nebraska Certification Standards for physical purity and germination. The Nebraska Seed Law requires **EACH** container of seed be labeled as to its origin, the germination percentage and date of test, the percentage by weight of pure seed, other crop seed, weed seed, and inert matter. By studying the **CERTIFIED LABEL**, a buyer can determine the quality of the seed. If Certified seed is purchased in the bulk, each sale is accompanied by an official Retail Bulk Sale Certificate, which includes the same information as a label.

Orders for Certified seed may be accepted by the listed growers, approved conditioners, and authorized distributors only with the understanding that they will be filled if and when **ALL** the certification requirements are completed.

**PLANT VARIETY PROTECTION ACT
HOW IT BENEFITS YOU!**

- Any varieties listed in this publication under the Plant Variety Protection Act will be marked with the **PVP** logo.
- It takes up to ten years to develop a new variety. PVP encourages plant breeding research to produce even better varieties for tomorrow. Without PVP, plant breeders could not afford to invest capital into new varieties and would not be interested in breeding improved varieties.
- Most protected varieties can only be sold as certified quality seed. This helps ensure that the seed buyer gets the variety exactly as the breeder intended it to be.
- The use of certified quality, genetically pure seed allows the varieties you've chosen to make the most of the growing environment.
- The Department of Agriculture is responsible for enforcement of Plant Variety Protection violations in Nebraska. Private seed companies are authorized to take appropriate legal action. Contact the Department of Agriculture (402-471-2394) for more information about your rights and responsibilities with PVP varieties.

Notice to Buyer: Exclusion of Warranties and Limitations of Damages

Seed bearing authorized Nebraska Certified Quality labels has met the minimum requirements outlined in the current edition of the *Nebraska Seed Certification Standards*. The seed certification process relies upon samples and records provided by members/applicants which are beyond the control of the certifying agency. Therefore, the Nebraska Crop Improvement Association makes no warranties, expressed or implied, including warranty of merchantability, or fitness for a particular purpose concerning certified seed and hereby expressly disclaims the same. In no event shall the Nebraska Crop Improvement Association be responsible for damages, actual, incidental, or consequential, regarding certified seed provided by applicants/members and/or vendors. However, complaints addressed to the Nebraska Crop Improvement Association will be investigated.

1 U.S. Plant Variety Protection: N = not protected, A = PVP applied for, P-94 = Applied for or protected under revised PVP Act of 1994.

2 These comparative ratings are based on each variety's average performance within its area of adaptation under normal Nebraska growing conditions and cultural practices. Plant performance will be influenced by soil, weather, pests, and other production conditions.

3 R=resistant; S=susceptible; MR=moderately resistant; MS=moderately susceptible; M=moderately tolerant; T=tolerant. The reaction may vary depending on disease or development, management practices, and/or plant growth stage or deviations in genetic resistance within the variety.

4 A rank of medium means 15 to 16% grain protein content is typical.

Agronomic or disease ratings have been adapted from information made available by the variety owner. For the most accurate information please contact the variety owner or your seed supplier

HARD RED WINTER WHEAT

PVP AP18 AX - AP18 AX is a medium maturity Aggressor herbicide tolerant line with excellent yield potential. It has strong disease tolerance to wheat streak mosaic virus, leaf rust, and stripe rust. These traits, in addition to its winter hardiness, shatter resistance, and very good test weight, makes AP18 AX a great fit across the plains. U.S. Protected Variety(PVPA 1994). Certificate No. 20202000351. AP18 AX can only be sold as a class of certified seed.

PVP AP503 CL2 - AP503 CL2 is an awned, white chaffed, medium maturing, semidwarf with excellent straw strength. It has good winterhardiness and very good milling and baking qualities. It has moderate resistance to leaf and stripe rusts and is susceptible to Hessian fly. It contains two genes that confers tolerance to the BASF herbicide Beyond and is to be used as a component of the BASF CLEARFIELD Production System which requires the grower must purchase Certified AP503 CL2 wheat seed and must agree not to save seed for planting. Any unauthorized planting variety will be punishable under the U.S. Patent law. It was developed, produced, and marketed exclusively under the AgriPro brand name. U.S. Protected Variety (PVPA 1994). Certificate No. 200800322. AP503 CL2 can only be sold as a class of certified seed.

PVP AMPLIFY SF - Amplify SF hard red winter wheat developed by Colorado State University. It is a line selection from the cross Bearpaw/Antero//Antero. Amplify SF is a semi-solid stemmed variety for partial resistance to the wheat stem sawfly. Amplify SF was tested throughout the U.S. hard winter wheat region and has excellent adaptation to areas where the presence of wheat stem sawfly is a significant concern. U.S. Plant Variety Protection Applied For. Amplify SF can be sold as a class of certified seed.

PVP LCS ATOMIC AX - LCS Atomic AX is a hard red winter wheat CoAXium® variety. It is an early maturing variety with a short plant type and is a few days earlier than LCS Helix AX. LCS Atomic AX is known for how well it handles heat and drought conditions. This variety has quick emergence and has a strong disease package. LCS Atomic AX is resistant to Aggressor® brand herbicides, making it an excellent tool to clean up fields with Bromus species, feral rye, cereal rye, jointed goatgrass, wild oats and volunteer cereals. U.S. Protected Variety (PVPA 1994). Certificate No. 202000234. LCS Atomic AX can only be sold as a class of certified seed.

NCIA Seed Laboratory

NCIA is the only **Official** AOSA Seed Testing Laboratory in Nebraska. NCIA's laboratory offers rapid turn-around of your samples and reliable results.

Seed Testing Services include: Purity, Germinations, AOSA or ISTA methods, Tetrazolium Viability, Vigor Assessments, Herbicide Resistance testing, Treated Seed Evaluation, Moisture, Seed Counts, Test Wt. We also offer online access to results and reports. Check out the NCIA website for more information on services and prices. www.necrop.org

PVP AP BIGFOOT - AP Bigfoot is a hard red winter wheat developed by Syngenta Crop Protection AG. It was selected for height, maturity, green leaf duration, yield, disease, and quality. Testing was conducted in Colorado, Kansas, Nebraska, Oklahoma, and Texas. U.S. Plant Variety Protection Applied For. AP Bigfoot can only be sold as a class of certified seed.

PVP CANVAS - Canvas is a Denali/Antero//Byrd cross providing strong dryland and leading high moisture performance in agronomics and yield. Stripe and stem rust resistance is excellent with good resistance to WSMV & SBMV. Canvas maintains excellent test weight and makes protein very well. End-use quality is very good. Canvas stands well under high fertility and moisture, making it a good candidate for intensive management. U.S. Protected Variety (PVPA 1994). Certificate No. 201900408. Canvas can only be sold as a class of certified seed.

PVP COWBOY - Cowboy is an awned, white-glumed, hard red winter wheat that has been jointly released by the Colorado Agricultural Experiment Station, the University of Wyoming Agricultural Experiment Station and the CRFW. Cowboy is medium in height and coleoptile length with fair straw strength and has adequate winter hardiness for the central and southern Great Plains area. Cowboy has resistance to stripe rust and moderate resistant to US races of stem rust. Cowboy is also resistant to Hessian fly. Cowboy is susceptible to leaf rust and (Ug99) stem rust. U.S. Protected Variety (PVPA 1994). Certificate No. 201300477. Cowboy can only be sold as a class of certified seed

PVP Husker Genetics FREEMAN brand (NE06545) - Freeman is a semi-dwarf wheat moderately early in maturity and approximate mature plant height of 34 inches. It has moderate straw strength and good winter hardiness. It is resistant to Soilborne wheat mosaic virus and moderately resistant to moderately susceptible to stem rust, leaf rust, and stripe rust. It is moderately susceptible to Fusarium head blight and susceptible to Hessian fly, barley yellow dwarf virus, and wheat streak mosaic virus. Freeman was developed cooperatively by the Nebraska Agricultural Experiment Station and the USDA-ARS. It was selected from the cross KS92-946-B-15-1/Alliance where the pedigree of KS92-946-B-15-1 is AB186*3414/Jagger/Karl92. U.S. Protected Variety (PVPA 1994). Certificate No. 01400398. Freeman can only be sold as a class of certified seed.

PVP LANGIN - Langin is an awned, white-chaffed, early maturing wheat with medium-short height, a medium length coleoptile, fair straw strength, and good test weight. It is derived from the cross CO050270/Byrd (CO050270 = Hatcher/NW97S295 pedigree). Langin has good winterhardiness, excellent drought stress tolerance, and very high yield potential. It has improved stripe rust resistance and slightly improved baking quality characteristics compared to Byrd. Langin is moderately resistant to prevalent races of stripe rust, susceptible to leaf rust and stem rust, moderately susceptible to wheat streak mosaic virus, susceptible to all biotypes of the Russian wheat aphid, and resistant to the wheat curl mite and wheat soil borne mosaic virus. It is marketed by the Colorado Wheat Research Foundation under the PlainsGold™ Brand. U.S. Protected Variety. (PVPA 1994). Certificate No. 201700298. Langin can only be sold as a class of certified seed.

HARD WHITE WINTER WHEAT

FV F AgriPro brand AP401 CL - AP401 CL is a hard white wheat exclusively for use in a contract grown Identity Preserved grain production system. It has short plant height, medium maturity and excellent straw strength. It is moderately resistant to leaf rust and resistant to soilborne mosaic virus and spindle streak mosaic virus. Milling and baking characteristics are good. U.S. Protected Variety (PVPA 1994). Certificate No. 200300045. AP401 CL can only be sold as a class of certified seed.

FV F BRECK - Breck is PlainsGold's newest hard white winter wheat variety. In addition to excellent milling and baking quality, Breck has low grain polyphenol oxidase, a property that favors its use in whole grain applications. It also offers excellent yields, similar to Antero, with excellent test weight and resistance to Stripe Rust. U.S. Protected Variety (PVPA 1994). Certificate No. 201800521. Breck can only be sold as a class of certified seed.

FV F MONARCH - Monarch is a medium-height, medium-maturing semidwarf wheat developed by Colorado State (CSU). Ownership has been transferred to the Colorado Wheat Research Foundation. It is a doubled haploid (DH) line developed using the wheat-maize hybridization method. It was tested throughout the U.S. hard winter wheat region. It is best adapted for dryland conditions in eastern Colorado, western Kansas, western Nebraska, and the Panhandles of both Oklahoma and Texas. No pest reaction claims are made. U.S. Protected Variety (PVPA 1994). Certificate No. 201900410. Monarch can only be sold as a class of certified seed.

NE96T441 - NE96T441 is a forage cultivar developed cooperatively by the Nebraska Agricultural Experiment Station and the USDA-ARS. NE96T441 was selected from the cross Trical/OAC-85-21/NE88T442. It is an awned, white-glumed cultivar whose primary use will be as an annual forage crop. NE96T441 is late in maturity, about 6 days later than Presto, and 1 day earlier than Trical 100. The winter hardiness of NE96T441 would be considered as good, similar to Trical 100 which is one of the most winter hardy triticale cultivars. It is moderately resistant to the currently prevalent races of stem rust and leaf rust Like most ryes and triticales, NE96T441 is moderately resistant to wheat streak mosaic virus.

OATS

PVP 126 - Everleaf 126 is a true spring oat with dark green foliage, an erect growth habit and very good standability. It is a delayed heading oat and much of its forage mass and quality come from an extended maturity. It is medium to tall in height. Under good moisture and fertility, heads emerge at 48 to 52 inches. It responds well under irrigation and stand erect and resist lodging. Everleaf 126 has shown resistance to rust and most other leaf and stem diseases. U.S. Protected Variety (PVPA 1994). Certificate No. 200400169.

HORIZON PROSO - Horizon is earlier in maturity than Sunrise and Earlybird, and later than Dawn. Plant height is about 33 cm and has straw strength similar to Sunup. Horizon has shown no susceptibility to Russian wheat aphid. Horizon has a white seed coat and closed type panicle. The foliage is green in color and is similar to Sunup.

HUNTSMAN PROSO - Huntsman is a moderately late variety heading about 1 day later than Sunup. Yield performance, test weight, plant height, and straw strength have all been similar to Sunup. Huntsman has a white seed coat and large seed size similar to Dawn. It was developed by Nebraska from the cross NE79012/NE79017/3/Cope//Dawn/Common.

PVP PLATEAU - Plateau is a moderately early waxy millet. It has a cream-colored hull and closed panicle. The foliage is green and is similar to 'Sunup'. Plateau was selected for release based on its yield potential compared to other waxy material, seed size comparable to adapted cultivars, and a range of maturity levels suited to the High Plains. It was selected from F₄ progeny of a cross between 'Huntsman'/PI436626, where pedigree of Huntsman is NE79012/NE79017/3/Cope//Dawn//Common'. U.S. Protected Variety (PVPA1994). Certificate No.201800103. Plateau can only be sold as a class of certified seed.

SUNRISE PROSO - Sunrise is a moderately early variety heading about 1 day earlier than Sunup. Plant height is about 3 inches shorter than Sunup with comparable standability. Test weight is above average. Yield performance has been slightly superior to Sunup. Sunrise is white-seeded, and seed size is large. It was developed by Nebraska from the cross NE83014/NE83007 and has parentage from Minn. 402, Dawn, Minco, and Panhandle.

TURFGRASSES

Buffalograss is a long-lived, sod-forming, native warm-season perennial grass which reproduces by seed and spreads vegetatively by stolons. It is very suitable for use under low to medium maintenance as an ecologically sound and energy efficient turf. It may be established by seed, plugs, or sod. Even without mowing, plants are very short height (6-8 inches). Buffalograss begins growth in mid to late May and begins to go dormant with the first frost. It has a light green color and fine textured leaves. It grows best in full sunlight and is adapted to a wide range of soil types. It has a higher resistance to drought stress than cool-season turfgrasses.

PVP BOWIE - Bowie is a widely adapted variety that exhibits quality vegetative characteristics. It has low growth habit and a medium green color. Bowie has a course to medium leaf texture. It has shown good disease tolerance to Leaf Spot and Dollar Spot and has good tolerance to the Buffalograss Mite. It has excellent vigor and establishes quickly with excellent drought tolerance to resist going dormant under drought conditions. Bowie was developed through the cooperative efforts of the Native Turfgrass Group and the University of Nebraska. Seed of Bowie is produced and marketed exclusively under the direction of the Native Turfgrass Group. Unauthorized production and sale of seed is illegal.

PVP CODY - Cody is a widely adapted, versatile turfgrass variety. It has low-growing plants which green up earlier in the spring and have a darker green color than most other buffalograss cultivars. It has a medium green color with excellent density and texture qualities. Once established and properly managed, Cody maintains a high quality turf throughout the summer. Excellent vigor and a good spread rate help it establish quickly. Cody was developed cooperatively by the members of the Native Turfgrass Group and the Nebraska Agricultural Research Division. Seed of Cody is produced and marketed exclusively under the direction of the Native Turfgrass Group.

PVP SUNDANCER - Sundancer is dark green buffalograss with a rapid rate of establishment, high density, and superior turfgrass performance when compared to other seeded buffalograss cultivars that are currently available for use in the turfgrass industry. It is adapted to a broad range of environments as evidenced by its overall performance in turfgrass evaluations conducted in AZ, CO, KS, NE, NM, UT, VA, and WA. Sundancer was developed by the University of Nebraska. Unauthorized production and sale of seed is illegal. U.S. Protected Variety (PVPA 1994). Certificate No. 201500497. Sundancer can only be sold as a class of certified seed.

PERENNIAL FORAGE GRASSES

Big Bluestem is a native warm-season, sod-forming grass which grows rapidly from mid-spring to early fall. Plants are tall (6+ ft) and robust. It is highly palatable even after maturity and is a high producer of nutritious forage and hay. Big bluestem is adapted statewide for range seedling on subirrigated sites and for irrigated pasture in mixed or pure stands. In eastern Nebraska, it is adapted on silty and clay sites.

PVP BONANZA - Bonanza is a synthetic variety developed by three generations of breeding for improved forage yield and forage digestibility. It produces good forage yields with high digestibility that results in improved animal gains when utilized by beef cattle in well managed grazing systems. Bonanza is earlier in maturity than Kaw, similar in maturity to Pawnee, and later in maturity than Rountree. U.S. Protected Variety (PVPA 1994). Certificate No. 200600049. Bonanza can only be sold as certified seed.

Little Bluestem is a native, warm-season bunchgrass which grows rapidly from mid June to early August. Plants are medium height (3+ feet) and well tillered. It has good forage value when leaves are tender and succulent, but palatability is only moderate for fall grazing. Little bluestem is adapted statewide for use in warm-season mixtures and pure stands on most soils and sites. It is not as drought tolerant as blue grama.

CAMPER - Camper is a synthetic variety produced by crossing two unrelated strains developed from original prairie sources by the USDA-ARS and Nebraska. It is a moderately late maturing grass, similar in maturity to Pawnee big bluestem. The combination of earlier maturity and diverse parentage provides wide adaptation.

CIMARRON - Cimarron is a tall, leafy composite of many strains of little bluestem from southwest Kansas, Colorado, New Mexico, Texas, and Oklahoma. Being a composite, it exhibits great variability in plant types. Cimarron grows from 2 to 4 feet in height and performs well in all kinds of soils and in limited areas of precipitation.

| Custer | Arrow Seed Co. | Broken Bow | 308-872-6826 | | 14 |

Bromegrass is an introduced cool-season, sod-forming grass which produces abundant forage in the spring and late summer for hay and pasture. It is widely adapted to eastern and central Nebraska and responds to intensive management practices. It is an early maturing grass and has moderate tolerance to drought and grazing.

PVP CACHE - Cache is recommended for use on irrigated and semi-irrigated pastures for forage production. It has increased forage yield, total seed yield, and seedling emergence. It produces significantly more dry matter forage than cultivars Regar and Fleet. Under limited irrigation, Cache meadow bromegrass produced significantly more dry matter than the cultivars Fleet and Regar. Cache is similar to Regar in establishment and persistence but significantly better than Fleet. U.S. Protected Variety (PVPA 1994). Certificate No. 200500277. Cache can only be sold as a class of certified seed.

Sideoats Grama is a native warm-season, mildly sod-forming grass which grows rapidly in late spring and may stay green into late summer. Plants are medium height (3+ feet) and well tillered. Forage value and hay quality are good but low in yield. Drought tolerance is good. Sideoats grama is well adapted for use in native grass mixtures throughout Nebraska.

BUTTE - Butte is a variety selected by the USDA-ARS and Nebraska for superior seedling vigor and establishment from native Nebraska ecotypes. It is a medium (mid-summer) maturity grass, somewhat earlier than Trailway. It is widely adapted, especially for those areas with relatively short growing seasons.

Indiangrass is a native warm-season, sod-forming species which provides palatable forage and hay, nearly equal to big bluestem in quality. Plants are 6+ feet and robust. It is well adapted throughout Nebraska for most soils and sites, for use in range or pasture seedlings in pure stands, and in mixtures with other tall warm-season grasses.

CHIEF - Chief was developed for improved yield and forage digestibility by USDA-ARS and the University of Nebraska for use in the central Great Plains and Midwest. Chief is adapted to HZ 4 and the upper half of HZ 5. It produces significantly greater forage yields than other available HZ 4 cultivars. It represents the second generation of indiangrass cultivars developed for use in production agriculture. It can be used in pure stands or multispecies mixtures with other grasses.

Switchgrass is a native warm-season, sod-forming grass which grows rapidly in late spring and early summer. On adapted sites, it has high yield of good quality hay and forage if cut or grazed early. On fall and winter range, palatability is low. Plants are moderately tall, very well tillered, and robust. It is well adapted for use throughout the Great Plains for conservation plantings or in warm-season pastures. Most cultivars are susceptible to stem rust. In some years forage quality and seed yield may be affected.

BLACKWELL - Blackwell is a warm-season, native, perennial species that is widely adapted. It is ranked high in leafiness, total forage, and resistance to rust and other diseases. It also possesses excellent seedling vigor when compared to other accessions. Blackwell was cooperatively released as a cultivar by SCS and the Kansas AES in 1944.

Intermediate Wheatgrass is a moderately late maturing, cool-season, sod-forming grass that produces excellent quality forage for hay or grazing in the late spring, early summer and fall. It is well adapted to all Major Land Resource Areas in Nebraska. Intermediate wheatgrass is more drought tolerant than smooth brome but less tolerant than crested wheatgrass. Plants are medium height (4+ feet), well tillered, and robust.

PVP BEEFMAKER - Beefmaker is an excellent grass for grazing. The in vitro dry matter digestibility (IVDMD) rating is 1-2 percentage points higher than other released wheatgrasses. Plant height 42.5 inches. The head length is 9.9 inches, and head width is 3.7. The flag leaf is located approximately 30.9 inches from the ground. It was developed by USDA-ARS and the University of Nebraska. U.S. Protected Variety (PVPA 1994). Certificate No. 200400232. Beefmaker can only be sold as a class of certified seed.

APPROVED SEED CONDITIONERS

An active APPROVED SEED CONDITIONER system is very important and an integral part of Nebraska's certification program. Approved Conditioners are seed cleaning firms who are authorized by the Board of Directors to purchase field-approved seed and move it to their plants for conditioning, submit samples for testing, order tags or certificates, and merchandise the finished product on a retail basis.

The objectives of the Approved Conditioner program are:

1. To expand the marketing options of seed producers who may not have adequate cleaning or merchandising facilities.
2. To provide the retail seed trade with reliable high quality sources of seed.
3. To improve the quality of seed available, while insuring maintenance of varietal purity.
4. To promote acceptance and use of Nebraska certified seed.

CUSTOM CERTIFIED CONDITIONERS

The function of the Custom Certified Conditioner is solely to provide seed cleaning and handling services—services which prepare certifiable seed produced by members from inspected acres for marketing channels.

Seed conditioners in this category voluntarily request inspection by the Association to provide quality assurance for the seed producer and seed consumer. Custom Certified Conditioners are subject to minimal procedural and equipment guidelines.

The objectives of the Custom Certified Conditioner program are:

1. To provide necessary conditioning services for seed producers and merchandisers who do not have adequate cleaning facilities.
2. To improve the quality of seed available while insuring maintenance of varietal purity.
3. To promote acceptance and use of Nebraska certified seed.

NOTE: Some firms listed as Approved Seed Conditioners also provide custom seed cleaning services.

2023 NCIA MEMBERS

Grower (GR) – A member who applies for field inspection services and used the services of either Custom or Approved Conditioners to prepare seed for marketing channels.

Grower-Conditioner (GC) – A member who applies for field inspection services and has adequate facilities for conditioning his own seed produced from inspected acres in preparation for marketing channels.

Custom Certified Conditioner (CC) – A member who may or may not apply for field inspection services and has adequate facilities for conditioning seed produced from inspected acres (by himself or other members) in preparation for sale in marketing channels.

Approved Seed Conditioner (AC) – A member who may or may not apply for field inspection services, has adequate facilities for conditioning seed, and may purchase bulk uncleaned seed from inspected acres of a crop grown by another member for conditioning, tagging, and sale in marketing channels as a class of certified seed.

Associate Member (AM) – Any other person, partnership, or corporation who would not be involved directly in the production, conditioning, or marketing of seed but is interested in furthering the goals of the Association may become a non-voting member.
